

# Preface

The Irony of words is as on the cover of this book. It is that those evolved to make use of them do so as if they are real. As if they allow us to report on reality. Far too many of those who believe this, also believe in communication and communities, literally. And there is the irony. Believers whose beliefs are only expressible using what it is they believe to be real signifying what they believe to be real based on the evidence of their own individual experiences<sup>1</sup>.
